Our vision is to be the most innovative European developer and manufacturer of contemporary designed and functionally excellent automatic sliding doors for demanding professional customers.

Automatic sliding doors are our passion

Knowledge, passion and history combined are the foundation of Doorson. Having our own development, technology and production allows us to create unique door solutions. We develop advanced solutions by means of innovative technologies. Our main focus is to integrate design in every detail.

We live in an online world. For fast, accurate and effective performance we connect with our partners by creating different online tools such as Door Calculator, Door Service and Door Base, which improve your experience.

We are building strong relationships with our clients around the globe. Development, production, installation, technical support and understanding our clients' needs is all part of our door technology. For us, a good partnership is the bridge to success.

We are aware that Doorson is much more than production of automatic sliding doors for the market; we behave as creators and specialists for custom door solutions made for end users, architects and our door partners.

300_ product line

Open your space

Highly efficient and attractively designed automatic sliding doors product line 300 for exterior and interior. They provide a variety of architectural possibilities when designing an office, hotel, restaurant, hospital or any other place. The only limit is your imagination.

Product line 300 and its modern 10 cm drive integrate into every building and meet the needs of even the most demanding users. Stylish, efficient and easy to use.

Design & functionality

Details make all the difference

The slim, minimalistic 10 cm drive is less intrusive and gives the door a modern look. The built-in sensor ensures a comfortable and safe entrance. The door is operated by our innovative drive controller with our very own door switches that offer various functions.

Since our automatic sliding doors consume less than 0.5 W of electricity when they are in sleep mode, you don't only cut your costs, but also contribute to a cleaner environment by using our energy-saving doors.

Product line 300 increases the security level and enables a safe and easy emergency exit for everyone.

DOOR CLOUD

Doors are connected to the cloud. Solve your problem remotely.

CAN

Door controller is CAN connected with sensors, switches and smart devices.

SAFETY OPERATION

Advanced security becomes possible with advanced technology. Your safety is our highest priority.

SAFE EXIT

Safe evacuation in case of an emergency.

Heavily used entrances

Fast mobility

No need to worry about how you will open the door when your hands are full. An automatic entrance allows for free movement for when your hands are taken up carrying things, for shopping trolleys and for people with reduced mobility. They are made for high frequency entrances and, moreover, they are friendly, elegant and practical.

0.3 - 0.7 m/s
open/close

Advanced solutions

First impression begins at the front door

Make sure to make the best first impression when your guests enter your building. The main entrance to your space should look welcoming from the outside in order to make a positive impression on the person who walks through the front door. When you integrate a glass door into a building you brighten and open up the entire space.

custom
design
you choose the image

Restaurant and hospitality

Think about the service, not the doors

Restaurants are a busy place and the staff is there to make the customers happy. However, this is hard to do when your hands are full and you have to worry about opening the door. Doorson's doors make their job easier with an automatic door opening.

Easy for the staff and your guests.

touchless
door opening

Healthcare

Touchless opening and clean hands

In healthcare environments everything matters. Doorson ensures that everybody in your building can move quickly, efficiently and safely. Besides the health and comfort of the patients, hygiene is the top priority. With an automatic and hands-free opening - closing we increase the level of hygiene. When the room is equipped with a control system, only authorized persons can enter. Privacy and security are guaranteed.

100%
hands-free access

Product range 300_

Doors for every need

From standard products to custom-made solutions, product line 300 has a very wide range of applications. The versatility of the doors makes them a perfect solution for different situations.

Product line 300 fulfills the essential requirements in the applicable CE directives and is available with the redundant function, which allows it to be installed on emergency exits and escape routes, according to the EN 16005 and EN 16361 standards.

300 thales | frameless sliding door

The transparency and simplicity of thales sliding doors impresses at first glance. They create a feeling of an open space and provide a discreet view at the same time.

Since the doors do not have vertical profiles, they are perfect for any interior. Whether it is an office, a hotel lobby, restaurant or your very own living room, thales will always find its place.

They are available in printed or matt glass, depending on your wishes and project. To make an even better first impression, you can decorate your doors with different decorative labels.

Open wider

300 T | telescopic sliding door

A telescopic automatic sliding door is a great solution for limited spaces. It can reach a wider opening even in the narrowest places. 300 T door comes in a one or two side opening variation, which in both cases creates a functional wide entrance that has the ability to adapt to any special architectural solution.

Combining the functionality and design of a standard automatic door, 300 T provides an elegant and efficient entrance.

A smooth operation that saves space and is a suitable solution even for the most limited conditions.

Safe open

300 A | break-out sliding door

In everyday situations 300 A functions as a standard automatic sliding door, which enables people to efficiently move through frequently used entrances.

They are an excellent choice for buildings that occasionally need a full-width opening, like furniture stores or car dealerships.

Their special feature is in their break-out leaves. In case of an emergency, you have to press on the leaves in order for the break-out to open. A swing door opening provides a safe rescue route out of the building.

300 A is multi-functional, easy to use and highly safe. A perfect solution for many different cases.

Inspiration on the corner

300 P | prismatic sliding door

A door entrance on the corner of a building could be an architectural challenge. By using a prismatic door you can create an exceptional lobby, withdrawn from wind and rain.

A double leaf prismatic door on the corner maintains the geometric glass screen symmetry and makes the entrance seem invisible.

The prestigious entrance becomes a part of the modern hotel building. It creates a functional and efficient entrance, without any restriction to moving people.

A unique solution that challenges architectural creativity.

500_ product line

On the safe side of fire

Fire automatic sliding doors combine the functions of standard sliding opening/closing with fire protection and a safe escape route without compromise.

Fire resistance EI30 and EI60 are used to separate fire sectors and prevent fire spread in the building.

In normal circumstances product line 500 functions as a standard automatic sliding door, providing easy going in-out. In case of an emergency or fire alarm, the sliding door 500 F reliably closes, which creates a barrier that prevents the spread of fire. While 500 EF and 500 EFS additionally transform from a sliding operation to a swing operation and provide a safe evacuation and rescue.

Design & functionality

Safety makes all the difference

The 17 cm drive presents a line shape that integrates into any architecture. Be impressed by reliability, security, robustness and advanced functionality.

The system is equipped with a built-in sensor that provides automatic opening and safety closing. To increase the safety opening, side safety sensors are integrated.

Moreover, additional functionalities are enabled by our very own door switches family.

Safe escape route in case of an emergency or fire alarm.

Business

Safety access control

An office building is a spread of working places, meeting rooms, halls, corridors, stairs and elevators. An architectural composition that integrates into the planned space organization and is compliant with the security measures.

Fire safety plays an important role in building construction. By using automatic fire sliding doors we bring more comfort, access control and safety in our building.

Product range 500_

Fire and exit safety

Fire protection is the highest level between all automatic doors. Security against fire demands more safety, more functionalities, more certifying. You can also use product line 500 on emergency exits and escape routes.

Product line 500 contains EI30, EI60 fire testing and certifying according to European directives and standards EN16005, EN16361, EN1154, EN179, EN1125. Our fire door production is certified.

Easy safety rescue

Safety barrier

500 F | fire sliding door

Fire sliding door 500 F functions as a standard automatic sliding door and provides a comfortable everyday transition through the door with a fire resistant ability that divides the two fire sectors on NON ESCAPE routes.

It is constructed for 30 or 60 minutes fire resistant fully expanded, from both sides of the door.

In case of an emergency, fire alarm or power failure, the mechanical spring system closes the door and keeps it closed. Escape is not possible.

The closed door resists the fire, which prevents the flames and heat radiation to spread from one sector to another.

Safety rescue

500 EF | escape fire sliding door

Fire sliding door 500 EF functions as a standard automatic sliding door that is convenient for all working spaces. It provides a comfortable everyday transition in-out with fire resistant ability, which divides the two fire sectors on ESCAPE routes. It is constructed for 30 or 60 minutes fire resistant fully expanded, from both sides of the door.

In case of an emergency, fire alarm or power failure, the mechanical spring system closes the door, which then, in a few seconds, transforms into a swing door. Safe evacuation is provided by swing opening, self-closes after that.

A swing opening is provided in the escape direction by pressing the panic bar and pushing the door. On the opposite side of the door, in the rescue direction, a swing opening is enabled by pressing the door handle and by pulling the door.

The swing opening provides a safe rescue of people and goods out of the danger zone. In case of a fire expansion, the door creates a safe barrier that stops the flames and heat from spreading to the safe side.

Easy safety rescue

500 EFS | escape fire sliding door

Fire sliding door 500 EFS functions as a standard automatic sliding door that is convenient for hospitals, working places, hotels, shopping malls and other public places where safety is first. Its fire resistant ability divides the two fire sectors on ESCAPE routes. It is constructed for 30 or 60 minutes fire resistant fully expanded, from any side of the door.

In case of an emergency, fire alarm or power failure, the mechanical spring system closes the door, which then in a few seconds, transforms into a swing door. Safe evacuation is provided by swing opening, that self-closes after that.

A swing opening is provided in the escape direction by pushing the door. On the opposite side of the door, in the rescue direction, the door simply opens by pulling the door with a flush handle.

The swing opening provides a safe rescue of people and goods out of the danger zone. In case of a fire expansion, the door creates a safe barrier that stops the flames and heat from spreading to the safe side.

In case of fire

Reducing risk, saving lives

A fire can occur anytime and anywhere, so it is extremely important that you are well prepared for anything.

The consequences can be devastating and even though you cannot prevent the fire from happening, fire doors can help you limit the damage and provide a way out.

fire barrier
prevent the spread of fire

swing
opening
for life saving

No escape

500 F

After the activation of a fire alarm, the sliding door transforms into a safety barrier. 500 F prevents the fire and heat radiation from spreading to the other side.

Escape routes

500 EF and EFS

Many forget about the importance of escape routes, because they are rarely used in that way. But they are extremely important, as they provide a quick and safe evacuation route in the event of a fire.

Automatic sliding door on escape routes provides high frequency transition in-out at normal operation. After the fire alarm, people can run freely out of the danger zone. A safe rescue is available.

Develop, test, certify

Innovative ideas, latest technology, stylish design

We are developing our doors with passion. True ideas are the key for creating something really new. We look for a challenge in every new task. We believe that every problem has a solution and that the effort pays off when you reach the final result. We always try to find balance between clean design and functionality.

The latest technology, IoT smart technologies and digitalization that we integrate into our doors provide smooth operation, redundancy, fire safety and safe operation. Moreover, it is easy to use and learn. All inside our verified advanced door solutions.

Product lines 500 EF and 500 EFS are the result of our very own invention.

Door switches

For best user experience

Doorson puts a strong emphasis on innovation, a unified design and functionality. Developing the door switches family from the beginning till today is something that makes us special. Automatic sliding doors can be combined with different sets of operational switches. Our switches are multifunctional and provide many user made combinations.

You can switch between different door modes:
OPEN, LOCK, STOP, AUTO summer, AUTO winter,
ONE WAY summer, ONE WAY winter.

Choose the right door switch for the right application.
With it you can easily control your door and customize
the functionalities.

COM 20 | touchscreen switch

Multifunctional touchscreen switch mode operator offers different settings, door parameter management, display warnings, errors and diagnostic management.

COM 21 | mechanical switch

Mechanical switch mode operator with 7 different modes: OPEN, LOCK, STOP, AUTO summer, AUTO winter, ONE WAY summer, ONE WAY winter.

SMART SWITCH | touchless opening

Multifunctional touchless opening with adjustable sensor detection 0.2m – 1m: NARROW, MIDDLE or DEEP.

SMART LOCK | touchless opening and locking

Multifunctional touchless opening and locking with three operation modes: OPEN, LOCK and AUTO. Adjustable sensor detection 0.2m – 1m: NARROW, MIDDLE or DEEP.

EMERGENCY SWITCH | open/close

For the use on escape routes, emergency exits, fire doors and other safety reasons with light indication. Emergency open for standard door and escape door. Emergency close for fire doors.

CLOUD GATEWAY | network management

Doors are connected by cloud gateway on network to DOOR CLOUD management. Web application providing door control and door management. Three different levels access as administration, service, end user. Door management is provided as control, errors, warnings, users, calendar. IoT functionality is integrated.

Touchless opening

Clean hands with a contact-free door opening

We make doors that provide a hygienic and comfortable opening. An entrance with a touchless door is a great benefit for every user. You can choose between a sensor or touchless switch.

Standard
access
control

Door cloud
& IoT

Local cloud

Smart Switch & Smart lock

Our Smart Switch and Smart Lock enable a controlled door opening that can be used in many cases and is easy to install. You can open the door by approaching the body, arm or hand, otherwise it'll stay closed. The choice of opening the door with the help of a Smart Switch is very convenient in narrow passages, where a door with a sensor would often open unnecessarily. They enable a wide range of applications like office, restroom, restaurant or healthcare facilities, where hygiene is very important. You can use Smart Switch or Smart Lock to selectively open the door. Adjustable accurate depth measurement allows you to open the door by entering the detection zone. In the corridor, you can pass the door and it will not open. But when you enter the zone, the door will be open.

Don't touch the handles, minimize the risk of infection.

Detection zone: 10 cm, 25 cm, 50 cm and 100 cm

Remote control

Access anytime, anywhere

Control your door system remotely. Doors are connected online and you can receive all information about what is happening with your system anytime and anywhere, 24 hours a day, 7 days per week.

Upgrade your door by using Door Cloud. Connect by mobile application, receive information about your door, use IoT functionality.

24/7
access

30%
cost savings

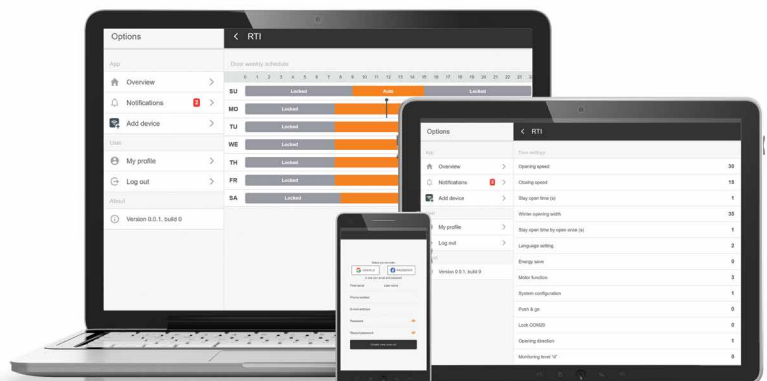

Security
safe connection

Full
door control

The door mobile app allows you to change door modes and functionalities. Use your smart device to adjust your doors, read the statistics and set the parameters. And that is not all - you also receive notifications and warnings.

Controlling your doors has never been so easy. All you need is a smart device and Internet access.

Save energy

Innovative energy solutions that contribute to saving the globe

Our philosophy is to produce highly energy efficient doors. We are fully aware that today's comfort leads to energy consumption.

70%
saving energy
and reducing CO²

< 0.5 W
consumption

Electric save - active save

Consumption <0.5W

Whenever the doors are still, in closed or open mode, the door controller falls in save mode, while energy consumption drops to 0.4 Wh, compared to other doors on the markets that use 20 - 30 Wh. In save mode the sensors, program switches and other electrical accessories fall in save or switch off mode.

PFC power factor correction 0.98

All electric consumers work on 0.60 efficiency on average. Low efficiency means more energy is consumed, more production, bigger power plants need to be built, a stronger network has to be provided. In today's world, there is around 40% loss, which creates a big opportunity. Our Door Controller works with electric power factor correction, and the result is PFC=0.98, which means only a 2% loss. We are proud to be one of the first.

planet

Thermal insulation - passive save

A highly efficient automatic sliding door system is constructed from thermally broken profiles, isolating material, gaskets, pressure expanding strips and highly insulated triple glass. Thermal insulation values for standard size doors reach a thermal transition lower than 1.0W/m²K in compliance with all relevant standards and directives. Air tightness plays an important rule as well.

With energy save products we do not just save the globe, but also cut the costs of energy that pay off your investment.

< 1.0 W/m²K
thermal insulation

Passive energy saving

Thermal break system closing leaves, bottom section

Thermal break system side section

Escape routes

Safe evacuation for everybody

Ensuring a safe evacuation in emergency situations is extremely important, especially when it comes to public buildings, where a large number of people are present. Automatic sliding doors on evacuation routes offer a comfortable everyday use, but at the same time ensure a safe evacuation in emergency situations. For the installation on evacuation routes you can choose between REDUNDANCE, BREAK-OUT and FIRE ESCAPE doors.

Redundant

A redundant door drive differs from a standard door drive by integrating two motors and two controllers, with battery and a watch dog management security system. Upon the activation of a fire signal, power failure, door malfunction or if the network power is cut off, the sliding door automatically opens and stays open, unless it is in "locked" or "stop" mode. Doors on evacuation routes are always fitted with an emergency switch that is close to the door and provides an emergency opening.

exit
for safe evacuation

All automatic sliding doors product line 300 are available in the redundant version.

Standard break-out

On evacuation and escape routes you can also use automatic sliding doors that provide a mechanical evacuation. They function as standard automatic sliding doors, but with a special break-out performance. A sudden pressure on the leaves transforms them and they open as swing doors. This provides an easy evacuation through the whole width of the doors. Both sliding and fixed leaves function as a break-out door.

Fire break-out

On evacuation and escape routes you can also use automatic fire sliding doors that provide a mechanical evacuation. They function as standard automatic sliding doors, but upon a fire alarm, they transform into swing doors. This provides an easy evacuation through the door leaves.

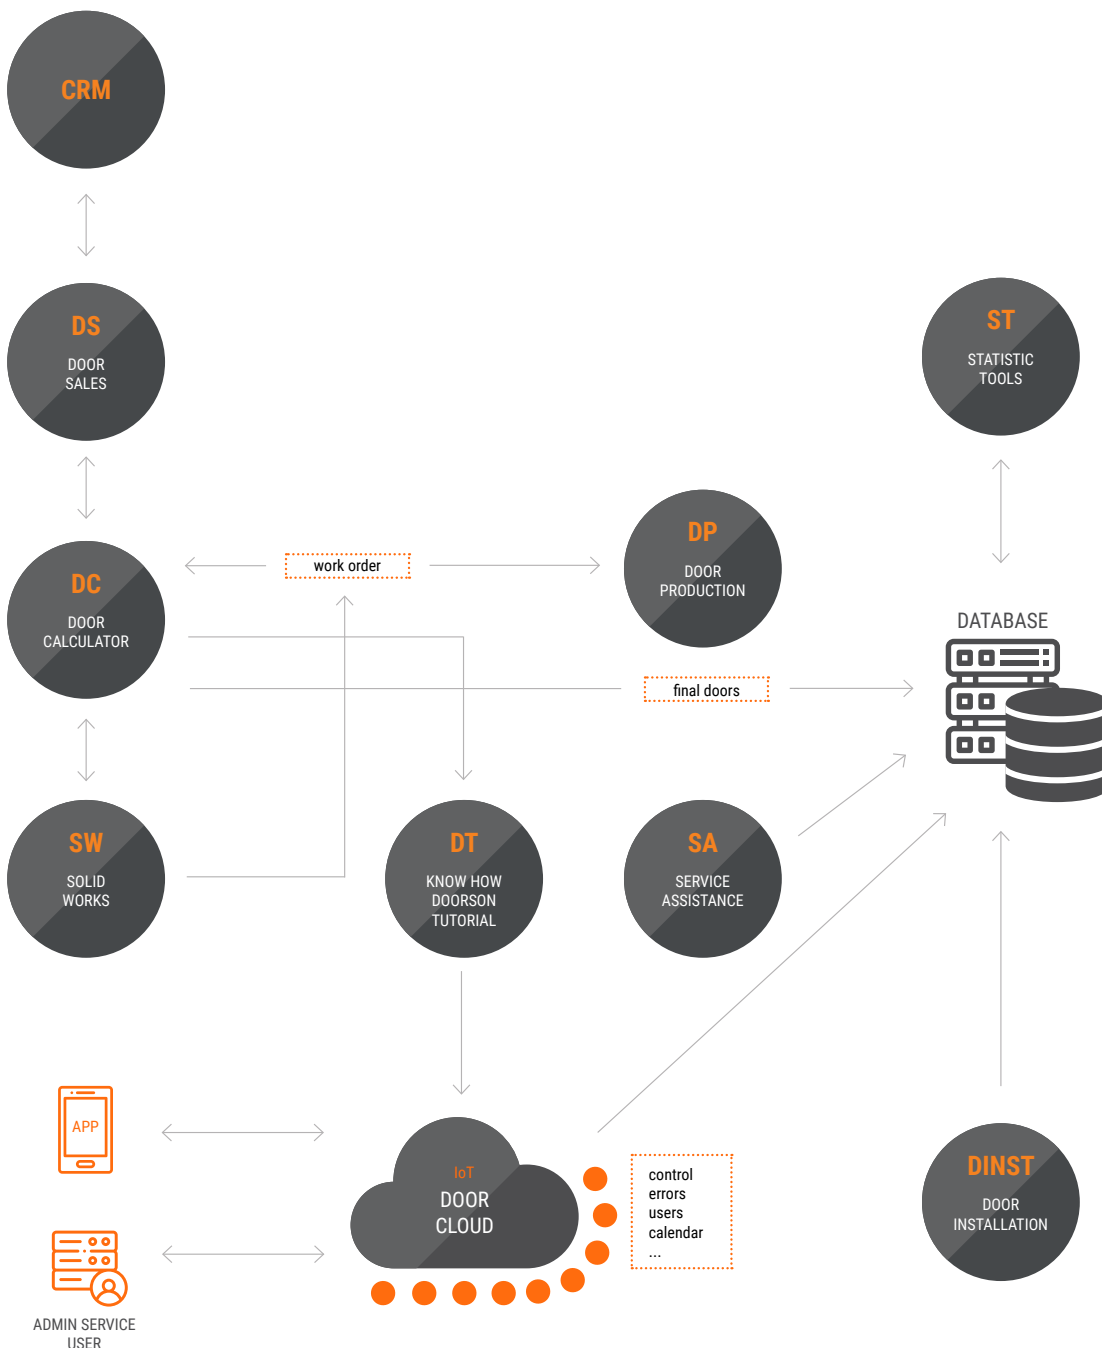

Digital transformation

Virtual reality

Doorson TOOLS enables effective working for partners.

With the digitalization of all processes within Doorson, we want to interconnect the business model of innovative technology with a successful customer approach, create a new culture of work with digital tools as well as educate our staff for a more sophisticated, effective and transparent work.

Door Calculator

Door Calculator is an online tool that enables a quick access to all our door features. It allows the creation of different combinations, offers an automatic output of technical data, a 3D model drawing, and price according to the chosen elements, as well as providing the possibility to place an order.

Door Sales

Door Sales is a web-based application that enables a fast and easy step-by-step creation of an offer. With it, we can trace the activities of our partners, which leads to a more effective co-operation and reduces the need for support activities.

Door Service

Door Service is an online tool, intended for the maintenance support of automatic sliding doors. On one hand, the app allows the maintenance manager to effectively allocate employees, and on the other, the service technicians can communicate more easily, see the available vehicles, schedule customers and have a complete overview of the material.

Door Calculator

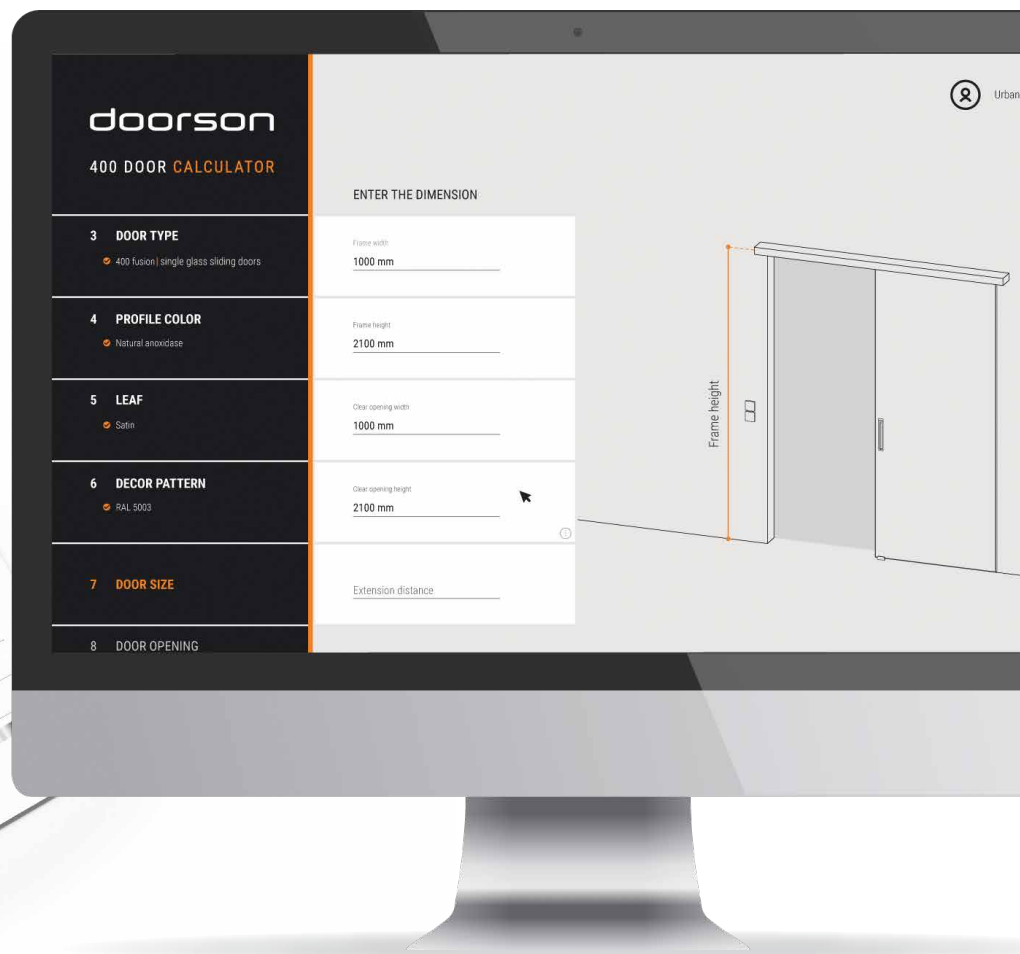

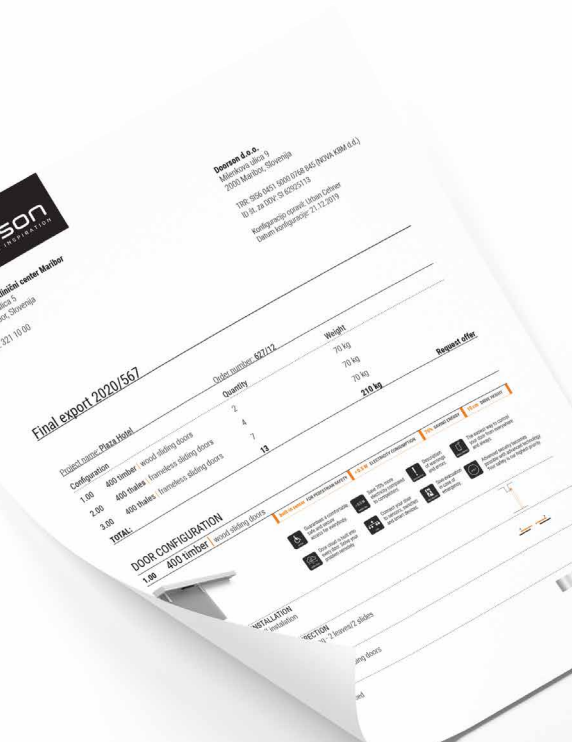

Configure your door

Our Door Calculator is an online web app that provides a quick, simple, visual and accurate customization of the door. Regardless of your profession, you can customize your door wherever and whenever needed.

The Door Calculator provides a regular configuration, guides you through logical steps by choosing combinations inside product families, while a 3D visualization at the end shows you the concept that you have chosen. Receiving an offer has never been this easy.

All information is available in one place, so you will not have to study technical brochures and waste your time.

Support Consulting Planning

At Doorson we strive to provide quality consulting and best planning for our customers. We are aware of the importance of your projects, so we help you choose the most suitable product and help you to reach your final architectural solution.

We provide our customers all the information about which door type is the best solution for their project. By consulting we also learn about new approaches, trends and demands in architecture.

Impressive results can be achieved by working together.

Service, maintenance & support

Get help anywhere and anytime

Our experts provide strong technical support and perform a skilled human approach. We support our clients and put a big focus on the aftersales.

For that reason we will continue to invest more time and money in our profession, in order to create satisfied customers.

efficient
problem solving

remote
technical support

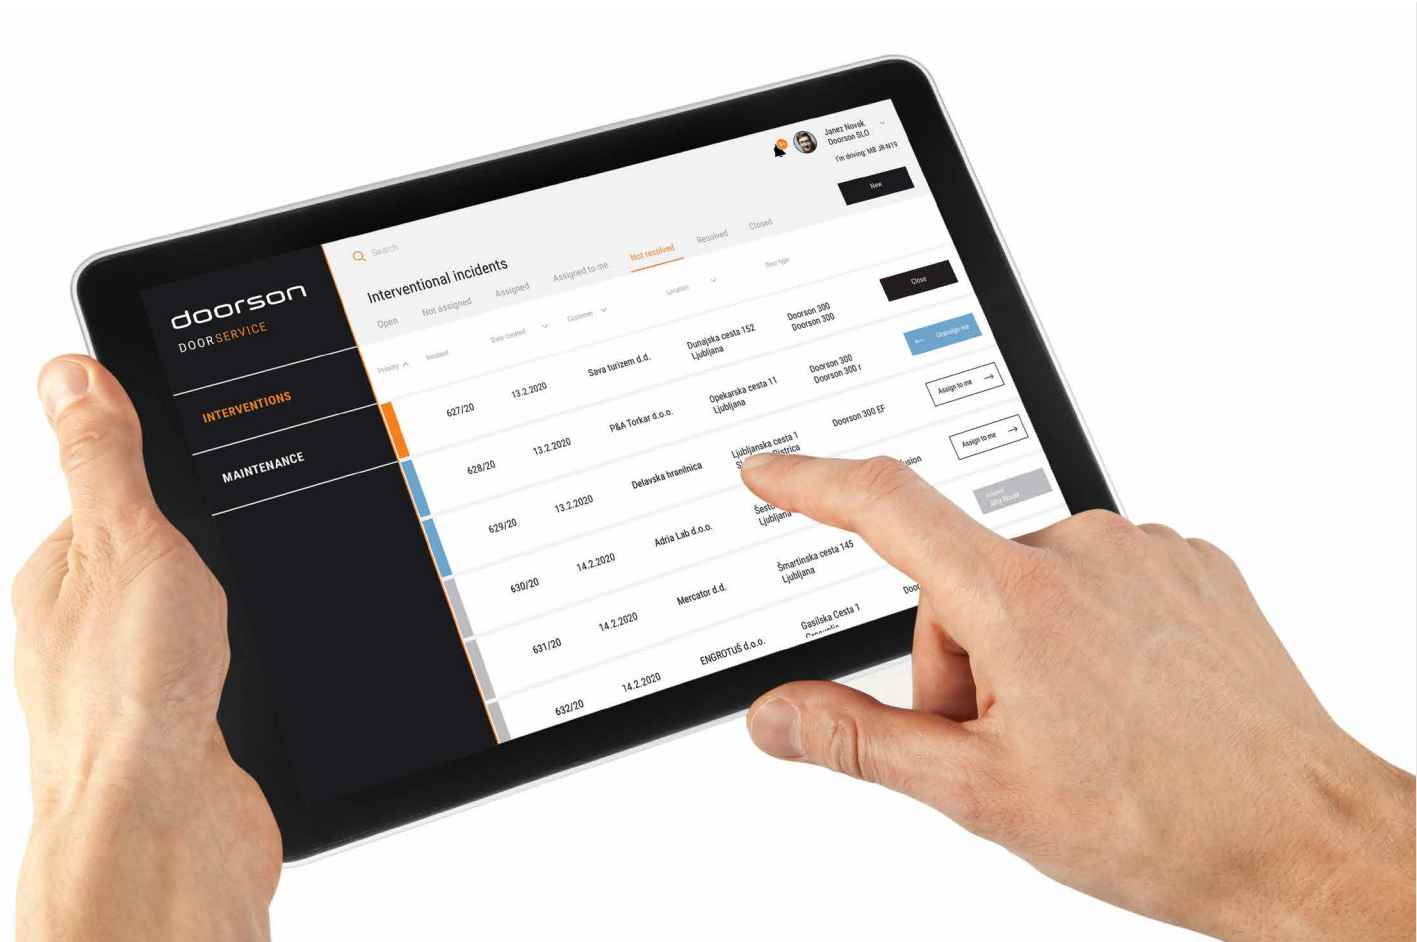

Our reliable partners need a global connection where they can make choices and also work from wherever they are at that moment.

The online app tool brings knowledge closer and provides support. We put great emphasis on a strong relationship between a client, partner, door system and the maintenance. The door service app provides strong support for your client anywhere and anytime.

Together we can be effective and efficient.
